# HW : Create ML for automating Loan Approval process.

# HW3: Create ML for Titanic dataset to predict who survived ?

**Steps:**
- Load the data
- Check missing value
- Label encoding
- Split x and y columns
- Normalization for (x) only
- Split the data into training and testing
- Build the model

**Note: Use (Logistic regression & KNN)**
- Evaluate the model using (confusion metrics)
- Optimize the model by changing the threshold level
